CHICK RELOCATES ITS WORLD HEADQUARTERS TO DALLAS

Existing Dallas Manufacturing Activities Consolidated into New Expanded Facility

DALLAS, TEXAS, January 14, 2008 – Chick Companies, Inc., a leading global provider of packaging and manufacturing logistics solutions, announced today the relocation of its world headquarters to Dallas and the expansion of its current Dallas-area production operations into a new facility. The headquarters and production space are located in a new industrial building in Coppell, TX, just five miles north of the Dallas-Fort Worth International Airport.

“We are extremely excited to center our global activities, here in Dallas,” said Brian Bulatao, President and Chief Operating Officer of Chick. “The business climate here is extremely strong, transportation access to the world’s major manufacturing centers is excellent and our local operations are growing very nicely.”

According to Scott Brown, General Manager of the Dallas operation, “Chick started its Dallas business with a greenfield site and one main customer a mere three years ago. Today we have more than one hundred customers and have outgrown the original location. New space was essential to accommodate our growth.”

“Scott runs a world-class operation here in Dallas,” said Mr. Bulatao “and we felt it was a real benefit to our business to co-locate the corporate offices with the production side. It makes it so easy to walk a customer or an investor around our factory floor and demonstrate the breadth and the quality of what we do.”

Chick expects to have a corporate staff of approximately ten executives and support staff in its new Dallas office by the end of its fiscal year in June.

About Chick Companies, Inc.

Headquartered in the Dallas-Fort Worth metroplex, Chick Companies, Inc., is a leading provider of packaging and manufacturing logistics solutions. The company’s strength is based on its ability to create value for its customers by managing important but often “non-core” elements of their production processes, enabling them to focus their time, investment and talent on their own core manufacturing expertise.

Chick’s services cover two essential areas of production:

- Packaging solutions: Custom-designed packaging, crates and skids, specialized protective solutions provided from our plants as well as on-site at customer locations.
- Logistics solutions: Kitting and subassemblies, vendor-managed inventory, value-added warehousing and other services to manage the inbound and outbound flows of goods, plus plant relocation, machinery moving and equipment fabrication.

With roots dating back to the 1870s, Chick is the largest company of its kind in the United States with operations in 13 of the country's most important manufacturing and distributions centers as well as a large production facility in the Port of Hamburg, Germany. In its specialty packaging area – the heart of Chick's historical activities – the Company has handled some of the largest, most complex and most demanding products on Earth, ranging from enormous power generating equipment and highly sensitive electronics to space shuttle prototypes for NASA and live Panda bears for the Washington Zoo.
